Geometric Algebra PGA. New blade factorization algorithm, new Join algorithm. 2008. We have found a new way to factor blades that also helps to speed up computing the join of blades. Computing the join of blades is now 10x faster than the algorithms presented in the book (as benchmarked in Section 5.11.2).

Geometric Algebra For Computer Science

In geometric algebra, you can use a unit vector a as a reflection operator by employing it in a sandwiching product: $a x a$ reflects the vector x in the line of a . It then follows from the figure that the geometric product of two unit vectors $R =$

Such extended geometrical entities are now basic elements of algebraic computation. We use the blades of a geometric algebra to algebraically represent all geometrical primitives. The scalars in a vector space are represented as 0-blades, the vectors by 1-blades, and the oriented area elements are 2-blades.
