politics, where social and political issues are always at the surface, using examples from such cities as New York City and Mumbai to examine how they can be better ecologically reorganized.

Historically, many architects, planners, and urban designers solicit idealistic depictions

of a controllable urban environment made from highly regulated geometrical organizations and systematically defined processes. Rather than working as urban "designers" who set out to control and implant external processes, we shift our approach to that of urban "detectives," who set out to chase the city. Charged with

approaching the city more responsively, we investigate what we do not know, allowing the city to direct our work. As urban detectives, we have the ability to interrogate and respond to the elaborate patterns emerging from self-generated, internalized urban interactions. Chasing the City asks what are the current design trends shaping

how we, first, understand the cities of today to, then, produce informed decisions on the continuously undefined evolving city of tomorrow. Intentionally, the work here does not adhere to rudimentary notions of supposed singularities or rely upon past generations of idealistic utopian models. Rather, *Chasing the City* delineates current

models of urban investigation that seek to respond to the nature of cities and develop heretofore-urban strategies as concurrently negotiated future urbanism. This edited volume provides a collection of innovative design research projects based on shared notions of Chasing the City through three bodies of strategic frameworks: (1)

Mapping, (2) Resource, and (3) Typology. This structure ultimately allows readers, as fellow urban detectives, access to exploratory tools and methods of detection that accumulate from our environs, both practical and projective in our chase of the city.

Providing new research and thinking about cities, their governance and planning reform, this book compares the UK with multiple international examples in order to examine cutting-edge experimentation and innovation in new models of governance and urban policy in response to today's increasing global social and environmental

This book focuses on peri-urban development processes in Africa, with special emphasis on Zimbabwe. The debates included highlight a number of issues in the

peri-urban context, such as access to water, appropriate technologies and land management, political economy in the peri-urban space, peri-urban agriculture, and place marketing in peri-urban development, among others. The debates raised by the authors in this book revolve around locating the peri-urban space within the context of

sustainability, in which key issues are addressed. The book essentially examines peri-urban development processes from various angles in an effort to understand how peri-urban areas develop, function, and how their residents survive. Peri-urban dwellers currently face numerous challenges, including land tenure insecurity, poor

infrastructure and services, land use conflicts, stringent planning law and land use planning regulations. This work seeks to address the “ knowledge gap ” on peri-urban development processes in Africa, and is also intended to inform urban policy practice in the African Cities and beyond. Offering policy makers valuable insights on

the peri-urban space, it provides guidance for decision-making in the contexts of service delivery, land management, housing, new town development and place marketing, among others.

The community is more than an abstract object of theoretical inquiry. It is also a place

where people live. It is difficult to determine where community research and theory merge, because the community is a unique place where theory and the real world come together. Local conditions change and new research techniques emerge. In the second edition of *The Community in Urban Society*, the authors solve this problem by

distilling the historic and foundational theories of community, applying traditional approaches (typology, ecology, systems theory, and conflict theory) to current conditions, and exploring new and relevant theories that impact today's communities. The latest edition also examines recent and emerging technologies that facilitate

examination and evaluation of the modern community condition. Updated coverage includes topics such as New Urbanism, modern network analysis methods, the urban political economy approach to community, the growth machine approach, GIS mapping, recent holistic studies, cyberspace communities, and up-to-date

discussions of community indicator studies, quality of life, community power, and regime politics.

This volume interrogates the intertwining of the local and the digital in environmental communication. It starts by introducing a wave metaphor to tease out major shifts in

the field, and situates the intersections of local places and digital networks in the beginning of a third wave. Investigations that feature the centrality of place and digital communication platforms show how we today, as researchers and practitioners, communicate the environment.

Contributions identify the need for critical

approaches that engage with the wider consequences of this changing media landscape, unpacking local and global tensions in environmental communication research. This empirical case study collection from different parts of the world shows that environmental activists and citizens creatively use digital technologies for

campaign purposes. It identifies new environmental communication challenges and opportunities, as well as practices, of environmental activists, NGOs, citizens and local communities, in the fight for social and environmental justice.
