"Essentials in
Ophthalmology" is a new

Page 58/78

review series covering all of ophthalmology categorized in eight subspecialties. It will be published quarterly, thus each subspecialty will be reviewed biannually.

Given the multiplicity of medical publications already

Download Ebook Heidelberg Engineering

available, why is a new series needed? Consider that the half-life of medical knowledge is estimated to be around 5 years. Moreover, it can be as long as 8 years between the first description of a medical

Download Ebook Heidelberg Engineering

innovation in a peer-reviewed scientific journal and publication in a medical textbook. A series that narrows this time span between journal and textbook would provide a more rapid and efficient transfer of

Download Ebook Heidelberg Engineering

medical knowledge into
clinical practice, and
enhance care of our
patients.

In the last 10 years, there
has been huge progress in
the general understanding of

Download Ebook Heidelberg Engineering

ocular disorders due to the availability and development of new in vivo imaging techniques, such as anterior and posterior eye segment optical coherence tomography as well as biochemical methods allowing rapid

Download Ebook Heidelberg Engineering

confirmation of clinical diagnosis. Introducing noninvasive diagnostic methods in ophthalmology led to an improvement in early differential diagnosis of conditions such as corneal dystrophies, dry eye

disease, and various retinal and optic nerve diseases. Recent advances in diagnostic methods have also impacted the treatment methods. This book intends to provide the reader with a comprehensive overview of

current ocular diagnostic methods, including the theoretical basis as well as practical approaches and usage in clinical practice.

When in the early 60s echography was introduced into the field of ophthalmology, very few ophthalmologists realized the enormous potential of this procedure, the fundamental impact it would

have on our branch of medicine or the innovations it would spawn. From its hesitant beginnings, echography has led to revolution in the field of ophthalmology and to our way of examining, treating and

monitoring patients affected by eye disorders. This technique has brought untold benefits to patients worldwide. A crucial element in fostering the advance of the application of ultrasound in ophthalmology

be truly international, and even though the instruments and apparatus used in the discipline are highly innovative, the underlying philosophy is one that traces back to Hippocrates, i.e., the healing of man and

the improvement of man's quality of life. The first SIDUO conference was held in 1964 in Berlin.
