Polyurethane chemistry is complex, but the basics are relatively easy to understand. Polyurethanes are formed by reacting a polyol (an alcohol with more than two reactive hydroxyl groups per molecule) with a diisocyanate or a polymeric isocyanate in the presence of suitable catalysts and additives. Because a variety of diisocyanates and a wide range of polyols can be used to produce ...

### How Polyurethane Is Made

JT: They could if they had recruited some chemists with a few years of training in chemicals. It's not something somebody on the street could pick up in a few weeks. They need a little more training than that, and they need proper facilities to make it. They need a chemical hood, but it certainly could be made.
