While this course requires little math
compared to most chemistry and physics
courses, it teaches fundamental concepts
of both chemistry and physics such that
the publisher presents it as equivalent to
two-years (or two credits) of high school
science, meeting the requirements for both
chemistry and physics. There is no lab
work in this course.

IPC consists of twelve chapters of text and twelve companion student activity books (180 lessons!). This course introduces students to the people, places and principles of physics and chemistry. It is written by internationally respected scientist/author, John Hudson Tiner, who applies the vignette approach which effectively draws readers into the text and holds attention. The author and editors have deliberately avoided complex mathematical equations in order to entice students into high school level science. Focus is on the people who contributed to development of the Periodic Table of the Elements. Students learn to read and apply the Table while gaining insight into basic chemistry and physics. This is one of our most popular courses among high school

students, especially those who have a history of under-performance in science courses due to poor mathematical and reading comprehension skills. The course is designed for two high school transcript credits. Teachers may require students to complete all twelve chapters for two transcript credits or may select only six chapters to be completed for one transcript credit for Physical Science, Physics, or Chemistry. Compliance with state and local academic essential elements should be considered when specific chapters are selected by teachers. As applicable to local policies, transcript credit may be assigned as follows when students complete all 12 chapters: Physical Science for one credit and Chemistry for one credit, or Integrated Physics and Chemistry for two credits. (May require supplemental local classes/labs.)

The mission of the book series, Research in Science Education, is to provide a comprehensive view of current and emerging knowledge, research strategies, and policy in specific professional fields of science education. This series would present currently unavailable, or difficult to gather, materials from a variety of viewpoints and sources in a usable and organized format. Each volume in the series would present a juried, scholarly, and accessible review of research, theory, and/or policy in a specific field of science education, K-16. Topics covered in each volume would be determined by present issues and trends, as well as generative themes related to current research and theory. Published volumes will include empirical studies, policy analysis,

This book discusses essential approaches and methods in connection with engineering education for sustainable development. Prepared as a follow-up to the 2015 Engineering Education in Sustainable Development (EESD) Conference held in British Columbia, Canada, it offers the engineering community key information on the latest trends and developments in this important field. Reflecting the need to address the links between formal and informal education, the scholars and professionals who contribute to this book show by means of case studies and projects how the goal of fostering sustainable development in the context of engineering education can be achieved. In particular, they discuss the need for restructuring teaching at

engineering? focused institutions of higher education and provide practical examples of how to do so. The book places special emphasis on state-of-the art descriptions of approaches, methods, initiatives and projects from around the world, illustrating the contribution of engineering and affiliated sciences to sustainable development in various contexts, and at an international scale.

Many projects in recent years have applied context-based learning and engagement tools to the fostering of long-term student engagement with chemistry. While empirical evidence shows the positive effects of context-based learning approaches on students' interest, the long-term effects on student engagement have not been sufficiently highlighted up to now.
