Introduction To Artificial Intelligence | Characteristics ...

Artificial Intelligence is a way of making a computer, a computer-controlled robot, or a software think intelligently, in the similar manner the intelligent humans think. AI is accomplished by studying how human brain thinks, and how humans learn, decide, and work while trying to solve a problem, and then using the outcomes of this study as a basis of developing intelligent software and systems.

Abstract The term Artificial Intelligence (AI) was coined by John McCarthy in 1956 during a conference held on this subject. However, the possibility of machines being able to simulate human behavior and actually think was raised earlier by Alan Turing who developed the Turing test in order to differentiate humans from machines.

Introduction to artificial intelligence in medicine

The course introduces the variety of concepts in the field of artificial intelligence. It discusses the philosophy of AI, and how to model a new problem as an AI problem. It describes a variety of models such as search, logic, Bayes nets, and MDPs, which can be used to model a new problem.

Introduction to Artificial Intelligence | Harvard University

Artificial intelligence (AI), is intelligence demonstrated by machines, unlike the natural intelligence displayed by humans and animals. Leading AI textbooks define the field as the study of "intelligent agents": any device that perceives its environment and takes actions that maximize its chance of successfully achieving its goals. Colloquially, the term "artificial intelligence" is often used ...

Artificial intelligence - Wikipedia

Where To Download Introduction To Artificial

The field of artificial intelligence, or AI, attempts to understand intelligent entities. Thus, one reason to study it is to learn more about ourselves. But unlike philosophy and psychology, which are also concerned with intelligence, AI strives to build intelligent entities as well as understand them.

Introduction to AI: A Modern Approach
Artificial intelligence (AI) refers to a machine or software performing tasks that would ordinarily require human brainpower to accomplish, such as making sense of spoken language, learning behaviors or solving problems (Figure 1). This means that an AI program can learn from real-world data as well as experience, and encompasses the capacity to improve its performance given more data.
