A particular circuit element is available in three grades. Grade A guarantees that the element can safely absorb $1/2W$ continuously. Similarly, Grade B guarantees that $1/4W$ can be absorbed safely, and Grade C guarantees that $1/8W$ can be absorbed safely. As a rule, elements that can safely absorb more power are also more expensive and bulkier.

circuits is the concept that electric circuits are a part of the basic fabric of modern technology. Given this theme, this book endeavors to show how the analysis and design of electric circuits are inseparably intertwined with the ability of the engineer to design complex electronic, communication, computer and control systems as well as consumer products. This book is designed for a one-to three-term course in electric circuits or linear circuit

Annotated Instructor's Guide
The Electric Current in a
circuit flows from positive
to negative while electrons
flow from negative to
positive. So when the switch
is on the path is complete
and electricity passes
through enabling the bulb to
light up, while when the
switch is not on, there is a
break in the flow of
electricity and the bulb
does not light up.
