Remote sensing is the art and science of recording, measuring, and analyzing information about a phenomenon from a distance. Humans with the aid of their eyes, noses, and ears are constantly seeing, smelling, and hearing

things from a distance as they move through an environment. Thus, humans are naturally designed to be remote sensors.

### Introduction to Remote Sensing - SUNY Oneonta

To perform the monitoring, Landsat 1 carried two remote sensing instruments: a camera system built by the Radio Corporation of America (RCA) called the Return Beam Vidicon (RBV), and the Multispectral Scanner (MSS) built by the Hughes Aircraft Company. The RBV was supposed to be the prime instrument, but the MSS data were found to be superior.
