Studies of the performance assessment of irrigation schemes have gained momentum since the late 1980s due to the common perspective that the resources (land and water) in irrigation schemes are not being managed appropriately. In this paper "irrigation water management" is considered as one of the activities of the irrigation scheme. Three phases of irrigation water management namely ...

evapotranspiration, pipe flow, pumps, open-channel flow, groundwater, center pivots, turf and landscape, drip, orchards, wheel lines, hand lines, surfaces, greenhouse hydroponics, soil water movement, drainage systems design, drainage and wetlands contaminant fate and transport. It contains summaries, homework problems, and color photos. The book draws from the fields of fluid mechanics, soil physics, hydrology, soil chemistry, economics, and plant sciences to present a broad interdisciplinary view of the fundamental concepts in irrigation and drainage systems design.

This co-edited volume provides a unified scholarly treatment of intensifying debates on the relationship between water scarcity and environmental security in Central Eurasia. Using discussions of sustainable rural development as its conceptual backdrop, the chapters in this volume combine solid empirical investigation with critical analysis of key concepts such as 'scarcity', 'expert knowledge', and 'efficiency'. The central theme emerging from the contributions emphasizes the need to reevaluate accepted wisdom in resource studies that considers distributional conflicts over water usage as inherently zero-sum outcomes in which one player's gains inevitably correspond to another player's losses. Instead, the empirical and critical analyses in this book demonstrate that effective management of water resources can be re-conceptualized as the basis for regional cooperation and sustainable rural development.
