The multiple and diverse forces of globalization have, indeed, affected Japan significantly over the past decades. But so, it must be said, has Japan influenced a variety of critical global developments - globalization is not a one-way street, particularly for a nation as economically influential and technologically advanced as Japan. The chapters in this collection examine the impact of globalization on Japan and the impact of Japan on the forces of globalization from the various disciplinary perspectives of business, the economy, politics, technology, culture and society. They also explain the manner in which the nation has responded to the economic and cultural liberalization that has been such a profound force for change around the globe. This comprehensive collected works brings the latest research to bear on this important subject and provides evidence of the long history of global influences on Japan – and Japanese impacts on the rest of the world. This book will be of interest to students and scholars of globalization, Japanese Studies, and Asian Studies.

For decades the crown jewels of Japan's postwar manufacturing industry, motorcycles remain one of Japan's top exports. Japan's Motorcycle Wars assesses the historical development and societal impact of the motorcycle industry, from the influence of motor sports on vehicle sales in the early 1900s to the postwar developments that led to the massive wave of motorization sweeping the Asia-Pacific region today. Jeffrey Alexander brings a wealth of information to light, providing English translations of transcripts, industry publications, and company histories that have until now been available only in Japanese. By exploring the industry as a whole, he reveals that Japan's motorcycle industry was characterized not by communitarian success but by misplaced loyalties, technical disasters, and brutal competition.
