This book aims to illustrate the impact of COVID-19 on the global aviation industry and its many facets and disruptive innovations this crisis is bringing to the industry, triggering a new phase of development for air transportation. As a result, there has been increased attention on the green aviation industry using new sustainable fuels (including hydrogen). The aviation industry is also moving towards operating electric aircraft. The book emphasizes a new concept of air travel and an entirely new type of aircraft called eVTOL, which is to say - electric Vertical take-off and landing aircraft. This new reality is already taking place with the development of prototypes. However, the road to its implementation is full of challenges. The later part of the book focuses on how China has opened doors to the private aviation sector as the country foresees an enormous opportunity to push its internal economy and aviation industry further.

This book provides indispensable knowledge for practitioners in aircraft financing. It presents an innovative framework that treats valuation analysis as a systematic effort in problem-solving directed at rational financial decision-making. It incorporates much of the modern approach to financial investment decision-making. It proposes essential tools of flexibility, adaptability, and commonality of aircraft financial analyses that apply to an almost infinite variety of valuation problem situations. Once these connections have been introduced, the reader will be equipped with an understanding of the underlying concepts of aircraft valuation processes and techniques and the subsequent financing alternatives available to fund aircraft assets. This is an essential book for airline professionals, aircraft leasing companies, consultants, bankers, government officials, and students of aircraft finance. It is an approachable resource for those without a formal background in finance.

Learjet 24 (24-123, N3731) Credit: Paul Bowen This book offers an unique, comprehensive retrospective on the Learjet aircraft, from the establishment by Bill Lear in the sixties, to its slow demise in 2021. It accompanies readers on a unique journey through the configuration changes, and advanced technological applications that have transformed business jets and their market in the last sixty years. Important insights are given into numerous patents and innovations that have shaped the development of new technologies and aerodynamic improvements such as the winglet. Furthermore, this book presents many special missions carried out by the Learjet family, such as VIP, business and ambulance flights, research and military projects, and the use of Learjet in aerobatics, as well as aerial photography and cinematography. With a great number of original photographs and drawings, interesting events, stories and anecdotes, this book provides today ' s aeronautical and systems engineers and test pilots with an invaluable source of information and inspiration. Yet, it also offers a compelling reading to students, professionals and scientists in the aerospace field as well as to curious readers with a general interest in aeronautics. Learjet 31A (31-131, N31LR) Credit: Paul Bowen

Transportation Infrastructure Engineering: A Multimodal Integration, intended to serve as a resource for courses in transportation engineering, emphasizes transportation in an overall systems perspective. It can serve as a textbook for an introductory course or for upper-level undergraduate and first-year graduate courses. This book, unlike the widely used textbook, Traffic and Highway Engineering, serves a different purpose and is intended for a broader audience. Its objective is to provide an overview of transportation from a multi-modal viewpoint rather than emphasizing a particular mode in great detail. By placing emphasis on explaining the environment in which transportation operates, this book presents the big picture to assist students in understanding why transportation systems operate as they do and the role they play in a global society.
