Macroeconomics –Notes –Summary –lecture 1 –13 –
wages, the foreign exchange rate, productivity growth etc. Thus macroeconomics focuses on the major lines of the economics of a society. The aspiration of macroeconomics is three-fold: 1. to explain the levels of the aggregate variables as well as their movement over time in the short run and the long run; 2. to make well-founded forecasts possible;

Featuring high-level analysis of Islamic law, this book examines fintech in Islamic finance from both theoretical and empirical perspectives. Whilst building on existing approaches, it also discusses the current application of fintech in promoting financial inclusion through innovative solutions in Muslim-majority countries, identifying future directions for policy-makers. With original chapters written by prominent academics, senior lawyers and practitioners in the global Islamic finance industry, this book serves as the first standalone pioneering reference work on fintech in Islamic finance. It also, for the first time, examines the position of Islamic law on cryptocurrencies, such as bitcoin. Besides the conceptual analysis of the Shar ah and legal aspects of fintech in Islamic finance, this book provides relevant case studies showing current and potential developments in the application of fintech in various sectors ranging from crowdfunding and smart contracts, to Online Dispute Resolution, Investment Account Platform and identity verification in the KYC process. Setting the agenda for researchers in the field, Fintech in Islamic Finance will be useful to students and scholars of Islamic finance and financial technology.

McrM has been an active research area for over 20 years and the previous conferences clearly showed a tremendous growth of interest. A variety of successful applications and recent developments of interactive computer software to support decision making confinn a sustained progress. We therefore decided to make our theme "Inproving Decision Making in Organisations". The aim was to take stock of the impact of multicriteria concepts in organisations and to involve management practitioners from a wide range of backgrounds. To this end the conference was organised round five broad themes and papers were solicited on the following topics:- Psychology - how do individuals in practice use and relate to the methodologies. Organisation - how do our models fit into the decision making framework of real organisations. Application - how have the models been used in practice and what is the users view. Methodology - what are the new areas in model development. Related Areas - is there complementary work eg. Expert Systems which may be attempting to solve very similar problems. The call for papers produced an overwhelming response of over 100 papers. They were from a variety of disciplines and applications, and we decided to devote approximately one day to each of the five areas. We are very impressed by the results which can be seen in this edited proceedings.

This brand new EMEA edition of Robert Barro's popular text brings an EMEA perspective whilst also being fully updated to reflect the macroeconomics of a post-financial crisis world. Starting with long-run macroeconomics, this text explores some of the key theories and models in macroeconomics such as the Keynesian model and the business-cycle model, finishing with extending the equilibrium model to the open economy. This exciting new edition provides an accurate and unified presentation of current macroeconomic thought whilst maintaining Professor Barro's original vision for his textbook.This edition also comes with the optional extra of Aplia, a comprehensive online learning assessment tool with auto-graded randomised questions to test students' understanding.

Economic Growth is an advanced undergraduate text written specifically for one semester courses in growth theory and for first year graduate students to refresh their knowledge. It will also be of great use for scholars and professional economists as the text contains many references to practical policy issues. The author condenses the fundamental issues of growth theory and covers the new ideas in a highly entertaining text, written in a clear and accessible style.

Get a new perspective from the ‘ other half ’ of macroeconomics The failure of the vast majority of economists in government, academia and the private sector to predict either the post-2008 Great Recession or the degree of its severity has raised serious credibility issues for the profession. The repeated failures of central banks and other policymakers in all advanced countries to meet their inflation or growth targets in spite of astronomical monetary easing, have left the public rightfully suspicious of the establishment and its economists. The Other Half of Macroeconomics and the Fate of Globalization elucidates what was missing in economics all along and what changes are needed to make the profession relevant to the economic challenges of today. Once the other half of macroeconomics is understood both as a post-bubble phenomenon and as a phase of post-industrial economies, it should be possible for policy makers to devise appropriate measures to overcome difficulties advanced countries are facing today such as stagnation and income inequality. • Shows how it ’ s possible to devise appropriate policy response to slow wage and productivity growth in these economies • Demonstrates that the effectiveness of monetary and fiscal policy changes as an economy undergoes different stages of development • Argues that tax rules, regulations and even educational system must be revised to match the need of pursued (by emerging nations) countries • Explains the 200-year process of economic development and where that process is taking all of us Inside, Richard C. Koo offers a completely new way of looking at the economic predicament of advanced countries today.

Include chapters such as: The Consumption Function, Government Debt and Taxes, and Dynamic Optimal Taxation. This book also features chapters dealing with difference equations, stochastic difference equations, and investment under uncertainty.

For some twenty-five years after the end of the Second World War, the IS-LM model dominated macroeconomics. Inspired by the work of John Maynard Keynes, this model demonstrates the relationship among savings, income, investments, and interest rates, showing the point at which the interaction of these elements produces "equilibrium" in an economy. With the advent of the new classical macroeconomics in the early 1970s, the dominance of the IS-LM model was effectively challenged. While no longer central to the graduate training of most macroeconomists or to cutting-edge macroeconomic research, the IS-LM model continues to be a mainstay of undergraduate textbooks, to find wide use in applied macroeconomics, and to lie at the conceptual core of most government and commercial macroeconomic models. This volume, the annual supplement to History of Political Economy, explores the rise, the fall, and the persistence of the IS-LM model. In addition to presenting papers from the History of Political Economy conference held at Duke University in April 2003, the volume includes the text of an address delivered at the conference by Nobel laureate Robert E. Lucas Jr., one of the central players in the intellectual movement that dethroned the IS-LM model. Contributors. Roger E. Backhouse, Mauro Boianovsky, Michael Bordo, David Colander, William Darity Jr., Michel De Vroey, Robert W. Dimand, Kevin D. Hoover, David Laidler, Robert E. Lucas Jr., Edward Nelson, Goulsen Rubin, Anna Schwartz, Scott Sumner, Warren Young

Examining empirical evidence such as how rich are the rich countries, how poor are the poor, and how fast do rich and poor countries grow, noted economist Charles Jones presents major theories of economic growth, from the Nobel Prize-winning work of Robert Solow to new growth theory that has ignited the field in recent years.
