"Ted Koppel reveals that a major cyberattack on America's power grid is not only possible but likely--and that it would be devastating" and "examines a threat unique to our time and evaluates potential ways to prepare for a catastrophe"--Book jacket.

In this New York Times bestselling investigation, Ted Koppel reveals that a major cyberattack on America's power grid is not only possible but likely, that it would be devastating, and that the United States is shockingly unprepared. Imagine a blackout lasting not days, but weeks or months. Tens of millions of people over several states are affected. For those without access to a generator, there is no running water, no sewage, no refrigeration or light. Food and medical supplies are dwindling. Devices we rely on have gone dark. Banks no longer function, looting is widespread, and law and order are being tested as never before. It isn't just a scenario. A well-designed attack on just one of the nation's three electric power grids could cripple much of our infrastructure--and in the age of cyberwarfare, a laptop has become the only necessary weapon. Several nations hostile to the United States could launch such an assault at any time. In fact, as a former chief scientist of the NSA reveals, China and Russia have already penetrated the grid. And a cybersecurity advisor to President Obama believes that independent actors--from "hacktivists" to terrorists--have the capability as well. "It's not a question of if," says Centcom Commander General Lloyd Austin, "it's a question of when." And yet, as Koppel makes clear, the federal government, while well prepared for natural disasters, has no plan for the aftermath of an attack on the power grid. The current Secretary of Homeland Security suggests keeping a battery-powered radio. In the absence of a government plan, some individuals and communities have taken matters into their own hands. Among the nation's estimated three million "preppers," we meet one whose doomsday retreat includes a newly excavated three-acre lake, stocked with fish, and a Wyoming homesteader so self-sufficient that he crafted the thousands of adobe bricks in his house by hand. We also see the unrivaled disaster preparedness of the Mormon church, with its enormous storehouses, high-tech dairies, orchards,

and proprietary trucking company - the fruits of a long tradition of anticipating the worst. But how, Koppel asks, will ordinary civilians survive? With urgency and authority, one of our most renowned journalists examines a threat unique to our time and evaluates potential ways to prepare for a catastrophe that is all but inevitable.

The television journalist reflects on the final year of the twentieth century, discussing the implications of such events as the Clinton impeachment and profiling some of the key figures who made the news.

With over 140 countries fielding nation-state and rouge malicious cyber hacking capabilities, it is critical that we are aware of threats and vulnerabilities. Adm. Michael Rogers, director of the National Security Agency warned Congress regarding cyber attacks, "It's only a matter of the 'when, ' not the 'if, ' that we are going to see something dramatic." Cyber Blackout is a warning. It is a chronicle of the cyber threats of which we find ourselves at risk every day. Our power supply is vulnerable. Our food supply. Even the basics of communication. Every facet of our national security is vulnerable to cyber threats, and we are not prepared to defend them all. Cyber Blackout explains how these threats have been building since the Cold War, how they affect us now, and how they are changing the concepts of war and peace as we know them. It is essential knowledge for anyone wishing to understand safety and security in the age of the fifth domain....

Originally published in hardcover in 2019 by Doubleday.

Learn About The United States Electrical Power Grid And What Would Happen If It Were Ever Attacked In A Fraction Of The Time It Takes To Read The Actual Book!!! Get this 1# Amazon bestseller for just \$2.99. Regularly priced at \$9.99. Read on your PC, Mac, smart phone, tablet or Kindle device Ted Koppel is well known for his role as a television news broadcaster from Nightline News, but he is also the author of Lights Out. In this book Koppel talks about what would happen to the United States if there was ever an attack on the electrical power distribution grid. An attack of this magnitude has never yet happened on American soil but if it did, Koppel wants the public to know what the consequences would be. It has been reported that much of the current electrical power grid has an infrastructure that has not been updated in many years. In addition to this, there is also a serious lack of security in place to make sure that an attack on the electrical distribution system does not take place. Here Is A Preview Of What You'll Learn When You Download Your Copy Today * How The Electric Power Companies Operate* The Reason Why The Electric Power Grid Is A Likely Target For A Terrorist Attack * Learn About What Would Happen To North America In The Event Of A Long Term Power Outage Download Your Copy Today! The contents of this book are easily worth over \$9.99, but for a limited time you can download the summary of Ted Koppel's "Lights Out" by for a special discounted price of only \$2.99

You Need To Read This Book because this will help you dive deeper into the world of Ted Koppel. Emmy and Peabody Award Winner Ted Koppel offers an investigative insight into the threat of a cyberattack on the United States' power grid. Lights Out provides input from national and industry experts, as well as local community members as to our awareness of and preparedness for a uniquely unpredictable form of attack in the Internet age. This summary serves as an accompaniment to Lights Out and offers insights to help you enjoy and understand this book. Inside, you'll find helpful information on: The Author's Background Cultural Context Plot Summary Title Significance Themes and Focus Points Writing Style and Structure Questions for Discussion Significant Quotes Disclaimer: This book serves as an accompaniment to the bestseller Lights Out: A Cyberattack, A Nation Unprepared, Surviving the Aftermath by Ted Koppel. It is meant to broaden the reader's understanding of the book and to offer some insights which can easily be overlooked. You should order a copy of the actual book before reading this.

Cyber-Physical Attacks: A Growing Invisible Threat presents the growing list of harmful uses of computers and their ability to disable cameras, turn off a building's lights, make a car veer off the road, or a drone land in enemy hands. In essence, it details the ways cyber-physical attacks are replacing physical attacks in crime, warfare, and terrorism. The book explores how attacks using computers affect the physical world in ways that were previously only possible through physical means. Perpetrators can now cause damage without the same risk, and without the political, social, or moral outrage that would follow a more overt physical attack. Readers will learn about all aspects of this brave new world of cyber-physical attacks, along with tactics on how to defend against them. The book provides an accessible introduction to the variety of cyber-physical attacks that have already been employed or are likely to be employed in the near future. Demonstrates how to identify and protect against cyber-physical threats Written for undergraduate students and non-experts, especially physical security professionals without computer science background Suitable for training police and security professionals Provides a strong understanding of the different ways in which a cyber-attack can affect physical security in a broad range of sectors Includes online resources for those teaching security management
