“ This third edition, appearing eighteen years after the second edition, is a further polishing of the existing approach. This book was and still is an interesting and useful text for a second course in linear algebra, concentrating on proofs after the concepts and mechanics have been covered in a first course. ” (Allen Stenger, MAA Reviews, maa.org, May, 2016)

...

Linear maps are mappings between vector spaces that preserve the vector-space structure. Given two vector spaces V and W over a field F , a linear map (also called, in some contexts, linear transformation or linear mapping) is a map: that is compatible with addition and scalar multiplication, that is $(u+v) = u + v$, $(au) = a(u)$ for any vectors u, v in V and scalar a in F .
