Logic In Computer Science Solution

I purchased Logic in Computer Science
2nd Edition recently in preparation for an
exam I have soon. This book has proven to
be very useful, it's full of useful
information and exercises to complete.
However, one caveat I have with the book
is that they don't provide completed
solutions to the exercises.

Recall that a first-order sentence G over a signature S is satisfiable if, and only if, there exists an S -structure F such that $F \models G$. Let R be a binary predicate symbol, Q a unary predicate symbol, and c an individual constant. (a) Show that the sentence $G \equiv \exists x \exists y : (R(x;y) \wedge \neg R(y;x))$

We believe, however, that a glance at the wide variety of ways in which logic is used in computer science fully justifies this approach. Certainly classical predicate logic is the basic tool of

Indeed, logic plays an important role in areas of Computer Science as disparate as artificial intelligence (automated reasoning), architecture (logic gates), software engineering (specification and verification), programming languages (semantics, logic programming), databases (relational algebra and SQL), algorithms (complexity and expressiveness), and theory of computation (general notions of computability).
