The meridian opposite the Prime Meridian (on the other side of the Earth) is the 180° longitude and is known as the antimeridian. Modern timekeeping systems use longitudes as references to keep time. Time zones are defined by the Prime Meridian and the longitudes. An Easy Way to Remember .

~~**What Is Longitude and Latitude?**~~
Longitude is a measurement of location east or west of the prime meridian at Greenwich, the specially designated imaginary north-south line that passes through both geographic poles and Greenwich, London.

~~**Latitude and Longitude | Definition, Examples, Diagrams —**~~
To measure longitude east or west of the Prime Meridian, there are 180 vertical longitude lines east of the Prime Meridian and 180 vertical longitude lines west of the Prime Meridian, so longitude locations are given as __ degrees east or __ degrees west.

~~**Understanding Latitude and Longitude — Journey North**~~
If you divide the circumference of the earth (approximately 25,000 miles) by 360 degrees, the distance on the earth's surface for each one degree of latitude or longitude is just over 69 miles, or 111 km. Note: As you move north or south of the equator, the distance between the lines of longitude gets shorter until they actually meet at the poles.
