Arguably the Mazda MX-5 was single-handedly responsible for the revival of the sports car market, sparking off a new era of convertible fun, and examples of this popular roadster are now plentiful and affordable on the second-hand market. This practical guide provides expert advice on how to breath new life into a used and perhaps tired example of this modern-day classic. From preventative maintenance, to the renewal of worn components and details of known problems and how to fix them, the clearly written, comprehensively illustrated text provides all the information required to enjoy an MX-5 on a budget.

Haynes manuals are written specifically for the do-it-yourselfer, yet are complete enough to be used by professional mechanics. Since 1960 Haynes has produced manuals written from hands-on experience based on a vehicle teardown with hundreds of photos and illustrations, making Haynes the world leader in automotive repair information.

Every Haynes manual is based on a complete teardown and rebuild, contains hundreds of "hands-on" photos tied to step-by-step instructions, and is thorough enough to help anyone from a do-it-your-selfer to a professional.

"Blue Pelican Java" is a somewhat unusual high school computer science textbook. Most computer science texts will begin with a section on the history of computers followed with a flurry of definitions that are just "so many words" to the average student. The approach here is to first give the student some experience upon which to hang the definitions that come later. The usual practice of introducing classes and objects is deferred until the student has a firm grasp of the fundamentals (loops, decision structures, etc). Thus, the beginning student is not overwhelmed by the simultaneous introduction of OOPs and the fundamentals. The book includes plenty of exercises (many in "contest"
