This book is for every employee that's required to consolidate hundreds of documents into a large, single document. Users will be able to extract data from hundreds of emails for documenting correspondence in seconds; users will be able to consolidate month-end reports and other business documents in seconds, and users will be able to manually resize, format and apply effects to hundreds of large images simultaneously in under a few seconds. Tasks that currently require days or weeks to complete can now be completed in under a few seconds. I've written each code to specifically eliminate redundancy in three different areas: email consolidation; document consolidation, i.e., Microsoft Word documents, text files, and email files; the last area deals with formatting, resizing and adding effects to hundreds of images in seconds. There's no need for a user to understand the codes in this book, because he or she will simply type the codes exactly as shown in this book, and his or her headaches will disappear.

Over 75% of network attacks are targeted at the web application layer. This book provides explicit hacks, tutorials, penetration tests, and step-by-step demonstrations for security professionals and Web application developers to defend their most vulnerable applications. This book defines Web application security, why it should be addressed earlier in the lifecycle in development and quality assurance, and how it differs from other types of Internet security. Additionally, the book examines the procedures and technologies that are essential to developing, penetration testing and releasing a secure Web application. Through a review of recent Web application breaches, the book will expose the prolific methods hackers use to execute Web attacks using common vulnerabilities such as SQL Injection, Cross-Site Scripting and Buffer Overflows in the application layer. By taking an in-depth look at the techniques hackers use to exploit Web applications, readers will be better equipped to protect confidential. The Yankee Group estimates the market for Web application-security products and services will grow to \$1.74 billion by 2007 from \$140 million in 2002 Author Michael Cross is a highly sought after speaker who regularly delivers Web Application presentations at leading conferences including: Black Hat, TechnoSecurity, CanSec West, Shmoo Con, Information Security, RSA Conferences, and more
