Hyperkalemia - MSD Manual Professional Edition

Hyperkalemia is a high level of potassium in your blood. Potassium helps control how your muscles, heart, and digestive system work. DISCHARGE INSTRUCTIONS: Medicines: Medicines will be given to remove potassium from your body. This will lower your potassium levels. This medicine may be given as a pill or an enema. Take your medicine as directed.

Hyperkalemia (Aftercare Instructions) - What You Need to Know

Moderate hyperkalemia management. A moderate increase in potassium level in a healthy individual can be corrected by its increased removal from the body through urine with the help of diuretics. The cause of the potassium rise due to increased intake should also be eliminated.

Hyperkalemia Treatment and Management Guidelines - Healthvigor

Blood potassium levels may be classified as follows: 3.6 ¶ 5.2 mmol/L. ¶ normal. > 5.2 mmol/ L. ¶ hyperkalemia. Levels higher than 5.2 mmol/L is what constitutes hyperkalemia. Levels in excess of 6 mmol/L are classified as dangerous and are associated with a range of serious symptoms.
