Monohybrid and Dihybrid Cross
Definition. Monohybrid cross: A

Read Book Monohybrid And Dihybrid Crosses

monohybrid cross can be defined as a genetic mix between two individuals who have homozygous genotypes or genotypes which have completely dominant or recessive alleles. This results in opposite phenotypes for a specific genetic trait.

Count the number of each genotype.

For a monohybrid cross, there are only three possible genotypes: BB, Bb, and bb. BB (brown hair) and bb (blonde hair) are homozygous for a gene meaning that they have two identical alleles for one gene. Bb (brown hair) are heterozygous

Read Book Monohybrid And Dihybrid Crosses

meaning that they have two different alleles for the gene. Some crosses may only give you one or two genotypes.
