Dieses Lehrbuch behandelt den Entwurf und die Programmierung von 16- und 32-Bit-Mikroprozessorsystemen. Es f ü hrt von den Grundlagen der Rechnertechnik und der Maschinenprogrammierung ü ber die Erkl ä rung der komplizierten Zusammen ä nge des Systemaufbaus und der Interface-Techniken bis zur Beschreibung der Funktionsweise von Ein-/Ausgabeger ä ten und Hintergrundspeichern. Die Stoffauswahl orientiert sich an g ä ngigen Prozessoren der Firmen Motorola, Intel und National Semiconductor, wobei auch die allerneuesten Entwicklungen (MC68040, i486, NS32532) ber ü cksichtigt werden. Das in erster Linie f ü r Studenten der Elektrotechnik und Informatik bestimmte Werk versetzt auch Anwender in die Lage, die geeignetsten Systemstrukturen zu entwickeln, die passenden Bausteintypen auszusuchen und die zugeh ö rige Software selbst zu entwerfen. Das Buch stellt eine v ö llig neubearbeitete 3. Auflage des erfolgreichen Werkes "16-Bit-Mikroprozessorsysteme" dar, nun mit dem Schwerpunkt auf 32-Bit-Systemen. Es eignet sich sowohl als Lehrbuch als auch als Nachschlagewerk.
