The tragedy that occurred in the United States on September 11, 2001 brought enhanced emergency preparedness among first responders to the forefront of public awareness. Since those events – and despite significant progress made in many of the areas previously deemed deficient – some response areas are still woefully inadequate. Cross-Training for First Responders highlights these weaknesses that, in many cases, still remain in the response community. The book presents concrete solutions that arm first responders with vital knowledge so that they are better prepared in the event of another major incident. Innovative training The author demonstrates that the best way responders can prepare for, react to, and mitigate an incident is to require them to train outside their traditional responsibilities – thereby developing an understanding of other first responder agencies' terms, methods, and operational procedures. Despite this enhanced situational training, communication gaps can occur during cross-response and across regions. The book explains the kind of training required to prevent a lack of situational awareness by those thrust into unfamiliar territory during crisis events or mass disasters.

Other topics include ways to curtail the inherent tensions that arise between voluntary and career responders, how to turn conflicts between various responding agencies into collaboration, innovative training strategies, grant opportunities to pay for training and equipment, and the rising trend of on-line training courses. Testing readiness before an incident occurs Finally, the book covers mechanisms for testing first responders' ability to apply their new cross-training techniques, demonstrates how to plan and conduct a "tabletop" drill, and explains how to review the drill results to determine the areas in which participants are still deficient. By identifying problem areas and offering concrete solutions, this book enables first responders to harness every possible advantage so that they are prepared and ready to confront the next crisis, no matter where it may strike.

This guidance was developed in coordination with Federal, State, tribal, and local Public Information Officers (PIOs). The goal of this publication is to provide operational practices for performing PIO duties within the Incident Command System (ICS). It offers basic procedures to operate an effective Joint Information System (JIS). During an incident or planned event, coordinated and timely communication is critical to effectively help the community. Effective and accurate communication can save lives and property, and helps

ensure credibility and public trust. This Basic Guidance for Public Information Officers provides fundamental guidance for any person or group delegated PIO responsibilities when informing the public is necessary. The guidance also addresses actions for preparedness, incident response, Joint Information Centers (JICs), incident recovery, and Federal public information support. The guidance material is adaptable to individual jurisdictions and specific incident conditions.

Comprehensive Preparedness Guide (CPG) 101 provides Federal Emergency Management Agency (FEMA) guidance on the fundamentals of planning and developing emergency operations plans (EOP). CPG 101 shows that EOPs are connected to planning efforts in the areas of prevention, protection, response, recovery, and mitigation. Version 2.0 of this Guide expands on these fundamentals and encourages emergency and homeland security managers to engage the whole community in addressing all risks that might impact their jurisdictions. While CPG 101 maintains its link to previous guidance, it also reflects the reality of the current operational planning environment. This Guide integrates key concepts from national preparedness policies and doctrines, as well as lessons learned from disasters, major incidents, national assessments, and grant programs. CPG 101 provides methods for planners

to: Conduct community-based planning that engages the whole community by using a planning process that represents the actual population in the community and involves community leaders and the private sector in the planning process; Ensure plans are developed through an analysis of risk; Identify operational assumptions and resource demands; Prioritize plans and planning efforts to support their seamless transition from development to execution for any threat or hazard; Integrate and synchronize efforts across all levels of government. CPG 101 incorporates the following concepts from operational planning research and day-to-day experience: The process of planning is just as important as the resulting document; Plans are not scripts followed to the letter, but are flexible and adaptable to the actual situation; Effective plans convey the goals and objectives of the intended operation and the actions needed to achieve them. Successful operations occur when organizations know their roles, understand how they fit into the overall plan, and are able to execute the plan. Comprehensive Preparedness Guide (CPG) 101 provides guidelines on developing emergency operations plans (EOP). It promotes a common understanding of the fundamentals of risk-informed planning and decision making to help planners examine a hazard or threat and produce integrated, coordinated, and synchronized plans. The goal of CPG 101 is to make the planning process routine across all phases of

emergency management and for all homeland security mission areas. This Guide helps planners at all levels of government in their efforts to develop and maintain viable all-hazards, all-threats EOPs. Accomplished properly, planning provides a methodical way to engage the whole community in thinking through the life cycle of a potential crisis, determining required capabilities, and establishing a framework for roles and responsibilities. It shapes how a community envisions and shares a desired outcome, selects effective ways to achieve it, and communicates expected results. Each jurisdiction's plans must reflect what that community will do to address its specific risks with the unique resources it has or can obtain. Planners achieve unity of purpose through coordination and integration of plans across all levels of government, nongovernmental organizations, the private sector, and individuals and families. This supports the fundamental principle that, in many situations, emergency management and homeland security operations start at the local level and expand to include Federal, state, territorial, tribal, regional, and private sector assets as the affected jurisdiction requires additional resources and capabilities. A shared planning community increases the likelihood of integration and synchronization, makes planning cycles more efficient and effective, and makes plan maintenance easier.

Developed and implemented by the United States Department of Homeland Security, the National Incident Management System (NIMS) outlines a comprehensive national approach to emergency management. It enables federal, state, and local government entities along with private sector organizations to respond to emergency incidents together in order to reduce the loss of life and property and environmental harm.

Course Overview This course describes the role, design, and functions of Emergency Operations Centers and their relationships as components of a multi-agency coordination system. The course contains disaster-related examples, activities and case studies that relate to EOC's and multi-agency coordination systems at the local, state and federal levels of government.

Course Objectives: At the end of the course, students should be able to:

- *Relate EOC operations to National Incident Management System (NIMS) requirements.
- *Describe the role that EOCs play in overall multiagency coordination.
- *Describe the relationship between the EOC and the on-scene Incident Command System (ICS) structure.
- *Identify staffing, information, systems, and equipment needs at the EOC.
- *Determine whether participants' EOC organizations are conducive to effective coordination.
- *Identify potential alternate locations suitable for EOC operations should the primary EOC facility become damaged or inoperable.
- *Create a test,

training and exercise plan for critical EOC operations. *Develop a strategy and schedule for reviewing EOC resource requirements and technology needs.

"The objective of this report is to identify and establish a roadmap on how to do that, and lay the groundwork for transforming how this Nation- from every level of government to the private sector to individual citizens and communities - pursues a real and lasting vision of preparedness. To get there will require significant change to the status quo, to include adjustments to policy, structure, and mindset"--P. 2.

Course Overview This course introduces those with critical infrastructure duties and responsibilities at the State, local, tribal, and territorial levels to the information they need and the resources available to them in the execution of the mission to secure and improve resilience in the Nation's critical infrastructure. Course Objectives: At the end of this course, the participants will be able to: -Summarize critical infrastructure responsibilities. -Identify the range of critical infrastructure government and private-sector partners at the State, local, tribal, territorial, regional, and Federal levels. -Describe processes for effective information sharing

with critical infrastructure partners. -Identify various methods for assessing and validating information. Primary Audience This course is designed for all individuals with critical infrastructure protection responsibilities. Prerequisites None. The following are recommended prior to starting the course: -Review of the National Infrastructure Protection Plan (NIPP) and Critical Infrastructure Support Annex to the National Response Framework (NRF) documents. OR-Completion of the following Independent Study courses: -IS-860.a, National Infrastructure Protection Plan and -IS-821, Critical Infrastructure Support Annex.

Course Overview ICS 200 is designed to enable personnel to operate efficiently during an incident or event within the Incident Command System (ICS). ICS-200 provides training on and resources for personnel who are likely to assume a supervisory position within the ICS. The Emergency Management Institute developed ICS its ICS courses collaboratively with: National Wildfire Coordinating Group (NWCG) U.S. Department of Agriculture United State Fire Administration's National Fire Programs Branch Primary Audience Persons involved with emergency planning, response or recovery efforts. NIMS Compliance This course is NIMS compliant and meets the NIMS Baseline Training requirements for I-200. Prerequisites IS-100.a CEUs 0.3

Course Overview This is a web-based training course on the National Incident Management System (NIMS) Incident Command System (ICS). The course is designed to provide training through an independent study vehicle on the use of ICS forms.

Course Objectives:

- *The participant will be able to describe the goals and objectives of the IS-201 course.
- *The participant will be able to identify and describe how an IAP is developed and implemented following the primary phases of the planning process.
- *The participant will be able to identify and describe the standard ICS forms that are used to support the development of an IAP and their importance for effective information management.
- *The participant will be able to identify and describe sources of information that provide input for composing ICS tactical and safety worksheet forms, and how those forms are used to develop information needed for key elements of the IAP consistent with the Planning "P".
- *The participant will be able to identify and describe the various ICS forms used for the development of the IAP, and the ICS staff positions responsible for gathering the information needed.
- *The participant will be able to identify and describe the purpose of supplemental ICS forms and documents needed to assist with information collection and dissemination needed during an incident.
- *The participant will be able to summarize the IS-201 course, citing key
