Kingdom of Nokia tells a fascinating story of corporatism in Finland. How did the mobile phone giant Nokia make the Finnish elite willing to serve the interests of the company? Nokia became a global player in mobile communications in the 1990s, and helped establish Anglo-Saxon capitalism in Finland. Through its success and strong lobbying, the company managed to capture the attention of Finnish politicians, civil servants, and journalists nationwide. With concrete detailed examples, Kingdom of Nokia illustrates how Nokia organised lavishing trips to journalists and paid direct campaign funding to politicians to establish its role at the core of Finnish decision-making. As a result, the company influenced important political decisions such as joining the European Union and adopting the euro, and further, Nokia even drafted its own law to serve its special interests. All this in a country considered one of the least corrupt in the world.

Following the success of the First MOBILIGHT 2009 in Athens, Greece, the Second International Conference on Mobile Lightweight Systems (MOBILIGHT) was held in Barcelona, Spain on May 10-12, 2010. It was not an easy decision to carry on organizing a scientific event on wireless communications, where competition is really enormous. This decision was motivated by discussion with many colleagues about the current unprecedented demand for lig- weight, wireless communication devices with high usability and performance able to support added-value services in a highly mobile environment. Such devices follow the users everywhere they go (at work, at home, while travelling, in a classroom, etc.) and result in exciting research, development and business opportunities. Such scenarios clearly demand significant upgrades to the

existing communication paradigm in terms of infrastructure, devices and services to support the "anytime, anywhere, any device" philosophy, providing novel and fast-evolving requirements and expectations on - search and development in the field of information and communication technologies. The core issue is to support wireless users' desire for 24/7 network availability and transparent access to "their own" services. In this context, we continue to envision an international forum where practitioners and researchers coming from the many areas involved in lightweight wireless systems' design and deployment would be able to interact and exchange experiences.

At present, collecting and analyzing data from inside Myanmar remains notoriously difficult. There is, therefore, a non-Myanmar approach towards the majority of studies on Myanmar. This is especially the case when dealing with informal or illegal trade within the country's territory. IRASEC and the Observatory on Illicit Trafficking wanted to fill this gap by giving the floor to Professor Winston Set Aung, the founder and the director of the Asia Development Research Institute, and director of the Asia Language and Business Academy in Myanmar. He is also an MBA lecturer at the Institute of Economics in Yangon and is involved in several international and regional research programs in partnership with various research institutes including the Institute of Asian Studies, Chulalongkorn University, Thailand; Tokyo University, Japan; and the Institute for Security and Development Policy of Sweden, Stockholm Environmental Institute. The focus of Professor Winston Set Aung's study is to provide a Myanmar-centric perspective on informal or illegal trade. The author offers an analysis regarding the process of informal exchanges through a pragmatic and non-contextualized critique. The causes of informal and illegal exchanges are identified and described without commenting on their origins. This intentional, measured, and calculated conservative perspective enables us to think on how to best use these flows in the current political situation in Myanmar. It seems therefore useful and relevant to make this data available to our readers.
