A bang-bang control
As we will see later in §4.4.2, an optimal control $u^*(\cdot)$ is given by $u^*(t) = \begin{cases} 1 & \text{if } 0 \leq t \leq t_1 \\ 0 & \text{if } t_1 < t \leq T \end{cases}$ for an appropriate switching time $0 \leq t_1 \leq T$. In other words, we should reinvest all the output (and therefore consume nothing) up until time t_1 , and afterwards, we

Optimal control theory is a branch of mathematical optimization that deals with finding a control for a dynamical system over a period of time such that an objective function is optimized. It has numerous applications in both science and engineering. For

Where To Download

example, the dynamical system might be a spacecraft with controls

corresponding to rocket thrusters, and the objective might be to reach the moon with minimum fuel expenditure. Or the dynamical system could be a nation's economy, with the object
