In this second edition, new questions have been added and existing material has been updated. The book's hybrid format bridges the gap between standard MCQ books and textbooks. It contains 280 exam-based paediatric MCQs written by a team of subject specialists. Each question is accompanied by the correct answer, plus a page-long subject summary focusing on the specific topics likely to occur in the examination, including lists, mnemonics and bullet points. This new format is a response to requests from exam candidates for longer teaching notes to counteract the need to refer to unnecessarily detailed textbooks.

The definitive guide to revision for the MRCPCH examination. 25 Chapters covering all areas the MRCPCH syllabus in note format. Concise presentation of information, with hints and tips. Vital facts presented in an attractive user-friendly format. Diagrams, pie charts, lists, illustrations and bullet points to aid learning.

Paediatrics Lecture Notes provides the information central to a thorough understanding of the care of children in clinical practice, drawing out key concepts in areas such as examination, communication and emergency paediatrics, in addition to systematically structured clinical topics. Incorporating brand new and updated material to reflect advances in various areas of child and adolescent health, such as genetics, behavioural and emotional problems and seizures, this edition is also ideal for exam preparation. Key learning features include: • Ready-made revision lists, OSCE stations and practice EMQs • New 'icon' system highlighting essential clinical topics throughout • Helpful key points and treatment boxes in every chapter • A new 'Symptom Sorter', available at www.lecturenoteseries.com/paediatrics, to help quickly determine which conditions should feature in your differential diagnoses An ideal resource for those encountering this area of study for the first time, on paediatric rotation, or needing to refresh their knowledge, Paediatrics Lecture Notes presents the vital information in one accessible and user friendly volume.

Decades of research have demonstrated that the parent-child dyad and the environment of the family – which includes all primary caregivers – are at the foundation of children's well-being and healthy development. From birth, children are learning and rely on parents and the other caregivers in their lives to protect and care for them. The impact of parents may never be greater than during the earliest years of life, when a child's brain is rapidly developing and when nearly all of her or his experiences are created and shaped by parents and the family environment. Parents help children build and refine their knowledge and skills, charting a trajectory for their health and well-being during childhood and beyond. The experience of parenting also impacts parents themselves. For instance, parenting can enrich and give focus to parents' lives; generate stress or calm; and create any number of emotions, including feelings of happiness, sadness, fulfillment, and anger. Parenting of young children today takes place in the context of significant ongoing developments. These include: a rapidly growing body of science on early childhood, increases in funding for programs and services for families, changing demographics of the U.S. population, and greater diversity of family structure. Additionally, parenting is

increasingly being shaped by technology and increased access to information about parenting. Parenting Matters identifies parenting knowledge, attitudes, and practices associated with positive developmental outcomes in children ages 0-8; universal/preventive and targeted strategies used in a variety of settings that have been effective with parents of young children and that support the identified knowledge, attitudes, and practices; and barriers to and facilitators for parents' use of practices that lead to healthy child outcomes as well as their participation in effective programs and services. This report makes recommendations directed at an array of stakeholders, for promoting the wide-scale adoption of effective programs and services for parents and on areas that warrant further research to inform policy and practice. It is meant to serve as a roadmap for the future of parenting policy, research, and practice in the United States.

Covers the most frequently asked and tested points on the pediatric board exam. Each chapter offers a quick review of specific diseases and conditions clinicians need to know during the patient encounter.
