A new directory that provides information on electronic databases worldwide in the field of agriculture taken broadly to include fisheries and forestry, food science, veterinary medicine, and self-sufficiency covering online, CD-ROM, magnetic tape, and diskette formats. The records provide informati

As American interests assumed global proportions after 1945, policy makers were faced with the challenge of prioritizing various regions and determining the extent to which the United States was prepared to defend and support them. Superpowers and developing nations soon became inextricably linked and decolonizing states such as Vietnam, India, and Egypt assumed a central role in the ideological struggle between the United States and the Soviet Union. As the twentieth century came to an end, many of the challenges of the Cold War became even more complex as the Soviet Union collapsed and new threats arose. Featuring original essays by leading scholars, *Foreign Policy at the Periphery* examines relationships among new nations and the United States from the end of the Second World War through the global war on terror. Rather than reassessing familiar flashpoints of US foreign policy, the contributors explore neglected but significant developments such as the efforts of evangelical missionaries in the Congo, the 1958 stabilization agreement with Argentina, Henry Kissinger's policies toward Latin America during the 1970s, and the financing of terrorism in Libya via petrodollars. Blending new, internationalist approaches to diplomatic history with newly released archival materials, *Foreign Policy at the Periphery* brings together diverse strands of scholarship to address compelling issues in modern world history.

Dokuchaev carried out most of his research in Ukraine. His student and friend, Volodymyr Vernadsky, went on to create trans-disciplinary environmental sciences and the concept of Earth as a living organism, famously taken up by James Lovelock. That spring of ideas still flows and the researches captured in this volume are relevant to present-day problems, and not only in Ukraine. Soils have always been under stress but, in the Anthropocene, mankind is in the driving seat. As a sequel to *Soil Science Working for a Living: Applications of soil science to present-day problems*, we consider issues of policy as well as soil genesis, attributes and functions in various environments, natural and man-made. We consider human impacts on the soil cover through its use and misuse, highlight methods of research and assessment of soil quality, and the threats of soil degradation. The distinguished contributors also describe and propose various options for evaluation and remediation of degraded soils, drawing on the latest methods of modelling and cartography as well as long-term field experiments and long experience. The book will be invaluable to researchers and practitioners in soil science including graduate and post-graduate education, academics and professionals.
