Feb. 1, 2018 — Researchers have developed a method for the mass preparation of cellular aggregates, also known as 'hair follicle germs (HFGs)', that may lead to a new treatment for hair.....

Hair Loss News -- ScienceDaily

Recent research has brought forward numerous methodological extensions that allow for a more nuanced assessment of results. These extensions include, for example, latent class segmentation, model comparisons, endogeneity assessment, and predictive model evaluation (Hair, Hult, Ringle, & Sarstedt 2017; Hair, Sarstedt, Ringle, & Gudergan 2018).

Journal of Business Research - Elsevier

Hair growth disorders often carry a major psychological burden. Therefore, more effective human hair growth-modulatory agents urgently need to be developed. Here, we used the hypertrichosis-inducing immunosuppressant, Cyclosporine A (CsA), as a lead compound to identify new hair growth-promoting molecular targets.

Identifying novel strategies for treating human hair loss ...

These programmes can be used also when scoring potentially subjective instruments. --- erosion is a method as defined by corbin and strauss 1988 as:. For the style manual subcommittee, council of science and other such types of video games on visual prompts from ...

The first two chapters of this invaluable book trace the developments of the chemistry and macromolecular structures, respectively, of proteins and nucleic acids. Similarly, the introductions to the succeeding chapters review, step by step, the historical landmarks in the topics covered. These include discoveries of biological phosphate esters, nucleotides and nucleotide coenzymes (important in intermediary metabolism), the nature of the genetic material and biological synthesis of proteins, formulation of the problem of the genetic code, and perspectives on bioenergetics. The selected papers illustrate the developments of the chemical synthesis of nucleotides and nucleotide coenzymes of ribo- and deoxy-ribo-polynucleotides (RNA, DNA), of the total synthesis of genes in the laboratory, and principles for gene amplification (PCR). Another major section covers studies of enzymes that degrade nucleic acids, the structure of transfer RNA and its role in protein synthesis, and the author's work on the elucidation of the genetic code. Finally, there are descriptions of the studies on biological membranes and the membrane protein bacteriorhodopsin, a biological proton pump. These studies elucidated the mechanism of proton translocation, which is central to bioenergetics.

American National Biography is the first new comprehensive biographical dictionary focused on American history to be published in seventy years. Produced under the auspices of the American Council of Learned Societies, the ANB contains over 17,500 profiles on historical figures written by an expert in the field and completed with a bibliography. The scope of the work is enormous--from the earliest recorded European explorations to the very recent past.

The book is a choice selection of exciting topics in molecular biology organized in a logical sequence starting with a historical and biochemical background, progressing through the structure and functions of nucleic acids, the role of nucleic acids in protein synthesis (including transcription and translation of genetic information) and culminating in a concise account of our current knowledge about genes and genomes.
