The first order partial differential equation can be written as .
 $f(x,y,z, p,q) = 0$, where $p = \frac{\partial z}{\partial x}$ and $q = \frac{\partial z}{\partial y}$.

~~Solution of a Partial Differential Equation~~

3 General solutions to first-order linear partial differential equations can often be found. 4 Letting $\xi = x + ct$ and $\eta = x - ct$ the wave equation simplifies to $\frac{\partial^2 u}{\partial \xi \partial \eta} = 0$. Integrating twice then gives you $u = f(\eta) + g(\xi)$, which is formula (18.2) after the change of variables.
