PDE Solutions Ch 2-5 (Evans) | Compact Space | Sequence A property of linear PDEs is that if two functions are each a solution to a PDE, then the sum of the two functions is also a solution of the PDE. This property of superposition can be used to derive solutions for general boundary, initial conditions, or distribution of sources by the process of convolution with a Green's function.

Lawrence C. Evans's Home Page - UCB Mathematics The solution is thus  $u(x,t) = A e^{i(kx+k^3t)} = A e^{i(k(x+k^2t))}$ . The dispersion relation is real so the PDE is dispersive. Taking the real part we get  $u(x,t) = A \cos(k(x+k^2t))$ , which is a left traveling wave moving with speed  $k^2$ . Waves with larger wave number move faster.

Applied Partial Differential Equations, 3rd ed. Solutions ... An ordinary differential equation is a special case of a partial differential equation but the behaviour of solutions is quite different in general. It is much more complicated in the case of partial differential equations caused by the fact that the functions for which we are looking at are functions of more than one independent variable.

Selected Problems from Evans - Columbia University 5. Many chapters are followed by numerous exercises. Partial solutions are presented at the end of the book. More elaborate problems are proposed in a separate section called "Problems" followed by "Partial Solutions of the Problems." The problems usually require knowledge of material coming from various chapters.
