The total [H +] from the two acids is 0.51 M and [OH -] from NaOH is 0.62 M. Therefore, 0.51 moles per liter of H + will react with 0.51 moles per liter of OH - to form water. That leaves a 0.11 M NaOH solution. The pOH of a 0.11 M NaOH solution is 0.96 pOH units, and the pH is 13.04 pH units.

pH scale. The pH scale (pH) is a numeric scale which is used to define how acidic or basic an aqueous solution is. It commonly ranges between 0 and 14, but can go beyond these values if sufficiently acidic/basic. pH is logarithmically and inversely related to the concentration of hydrogen ions in a solution. The pH to H + formula that represents this relation is:

pH Calculator—How To Calculate pH?

You can easily use a pH value to calculate pOH if you recall: pH + pOH = 14 This is particularly useful if you're asked to find the pH of a base since you'll usually solve for pOH rather than pH.
