### Phlebotomy Order of Draw And Study Aid | Phlebotomy Coach

Vacutainer tubes are covered with a Color-coded plastic cap that indicates which additives the tube contains. These color indicators help the phlebotomist to easily select the tubes in which the blood should be drawn as per the tests that have to be performed.

### COLOR CODES OF VACUTAINER TUBES AND ITS USES

Phlebotomy tubes with green top contain sodium heparin, lithium heparin and ammonium heparin, all of which are coated in the inside of the tube. The heparin anticoagulant activates antithrombins that block the coagulation cascade and produce a plasma sample or whole blood. The same tubes are used for clinical chemistry and STAT chemistry tests.
