The contributors to Territories and Trajectories propose a model of cultural production and transmission based on the global diffusion, circulation, and exchange of people, things, and ideas across time and space. This model eschews a static, geographically bounded notion of cultural origins and authenticity, privileging instead a mobility of culture that shapes and is shaped by geographic spaces. Reading a diverse array of texts and objects, from Ethiopian song and ancient Chinese travel writing to Japanese literature and aerial and nautical images of the Indian Ocean, the contributors decenter national borders to examine global flows of culture and the relationship between thinking at transnational and local scales. Throughout, they make a case for methods of inquiry that encourage innovative understandings of borders, oceans, and territories and that transgress disciplinary divides. Contributors. Homi Bhabha, Jacqueline Bhabha, Lindsay Bremner, Finbarr Barry Flood, Rosario Hubert, Alina Payne, Kay Kaufman Shelemay, Shu-mei Shih, Diana Sorensen, Karen Thorntner, Xiaofei Tian

Tells the story of how, with the help of two inspiring science teachers, four undocumented Mexican immigrants in Arizona put together an underwater robot from scavenged parts and went on to win the National Underwater Robotics Competition at UC Santa Barbara.

Just about every month, housing values in the U.S. fall. That, in turn, increases the number of people who owe more on their houses than they are worth—either trapping them in homes they may no longer want or putting them in danger of financial catastrophe if they lose a job or are otherwise unable to meet the mortgage. Underwater: Options When Your Mortgage Is Upside Down offers valuable advice to homeowners on ways they can unload a house they no longer want, save a home from foreclosure, or undergo foreclosure and start anew. The book offers smart advice from lawyers, bankers, real estate agents, personal finance experts, and homeowners who have seen the foreclosure process firsthand, as well as those who have been able to save their homes through loan modifications and other creative methods. Those faced with tough choices will find invaluable guidance to help them make well-informed decisions while managing the emotional fallout each brings. Many of the eleven million people in the U.S. now facing the “underwater” dilemma wonder: Is staying put the only option? What if I can’t pay the monthly mortgage bill? Can I save my home? Underwater: Options When Your Mortgage Is Upside Down outlines the options—when foreclosure is a good idea, how to best protect the equity you’ve built up, the financial repercussions of going into foreclosure, strategies for renegotiating a loan, taking advantage of government programs designed to keep you happily housed, and more. Veteran financial journalist Chris Lauer provides the facts, ideas, and advice that can help any underwater homeowner—especially those facing foreclosure—make smart decisions for a better future.

This book systematically summarizes the fundamentals and various technologies in both terrestrial radio wireless networks and underwater acoustic networks (UWANs). It addresses the basic issues frequently investigated in terrestrial radio wireless networks and the key technologies suitable for the newly developing research area of UWANs. Starting with a review of our current understanding of wireless networks, it then introduces the principles of the main technologies, including error control, medium access control (MAC) protocols, routing protocols, end-to-end transmission control and mobility issues as well as network security for terrestrial radio wireless networks, and offers detailed surveys of these technologies for UWANs. Providing readers with the basic knowledge of terrestrial radio wireless networking technologies and raising readers’ awareness of the developing topic of UWANs in ocean , it is a valuable resource for researchers and practitioners in terrestrial radio wireless networks and UWANs.

This book critically engages with how the conservation of tropical coral reefs is financed. Beginning with the context of tropical coral reef degradation and loss, alongside an overview of tropical ecology, global environmental policy and finance, the book reviews several conservation financing instruments. These include ecotourism, debt-for-nature swaps, impact investments, and government domestic budgetary expenditures. From the Great Barrier Reef, to the Coral Triangle, to the Mesoamerican Reef, tropical coral reef degradation and loss are serious global environmental issues, contributing to loss revenue and food insecurity for coastal communities, and species extinction. Yet, many leading companies, individuals, and governments are making a positive impact on tropical coral reef conservation through the use of conservation finance. Conservation of Tropical Coral Reefs, using 30 case studies which span 23 countries and 6 continents, tells the history of international conservation finance and provides a variety of options for individuals, businesses, and governments to support conservation financing projects. Brian McFarland is the Senior Vice President at Carbonfund.org Foundation. Brian is a certified Project Management Professional by the Project Management Institute, a Certified Sustainability Professional from the International Society of Sustainability Professionals, and holds dual graduate degrees in Business Administration and Global Environmental Policy. Brian has also published two previous books entitled, REDD+ and Business Sustainability and Conservation of Tropical Rainforests: A Review of Financial and Strategic Solutions.

A light-hearted silly tale about a hairy eyeball named Otis who swallows large bowls of jumping beans and leaps all over the planet. As he travels he sees flying chairs with wings, giant walking noses and ears, turtles, and many other creatures. After making his longest jump, Otis meets a group of happy hairy eyeballs and has his best day ever!
