Static Electricity. An atom consists of a nucleus (containing positively charged protons and neutral neutrons) orbited by negatively charged electrons. Electricity is the movement of these electrons.

Charged objects can experience a non-contact force because they are surrounded by an electric field. The field lines point away from a positive source and towards a negative source.

Coulomb's law. Coulomb's law gives the magnitude of the electrostatic force (  $F$  ) between two charges: . where  $q_1$  and  $q_2$  are the charges,  $r$  is the distance between them, and  $k$  is the proportionality constant. The SI unit for charge is the coulomb. If the charge is in coulombs and the separation in meters, the following approximate value for  $k$  will give the force in newtons:  $k = 9.0 \times 10^9 \text{ N ...}$
