Following in the successful footsteps of the "Anatomy" and the "Physiology Coloring Workbook", The Princeton Review introduces two new coloring workbooks to the line. Each book features 125 plates of computer-generated, state-of-the-art, precise, original artwork--perfect for students enrolled in allied health and nursing courses, psychology and neuroscience, and elementary biology and anthropology courses.

Designed to help students gain a clear and concise understanding of anatomy, this interactive approach is far more efficient than the textbook alternatives. Students as well as numerous other professionals, have found the workbook to be a helpful way to learn and remember the anatomy of the human body.

Readers experience for themselves how the coloring of a carefully designed picture almost magically creates understanding. Indispensable for every biology student.

Includes bibliographical references and index

Physiology Coloring Workbook is a breakthrough approach to learning and remembering the body's processes. Written and illustrated by experts who are both research scientists and teachers , it features 250 striking, original illustrations that will give students a clear and enduring understanding of physiology. Learning interactively, through coloring, thoroughly fixes physiological concepts in the mind and takes less time than memorizing from textbooks. Physiological processes are fully explained, and complex subjects are approached through the gradual introduction of simple drawings. The authors employ a logical and consistent use of color to convey invormation; for example, arterial blood is always red, whereas venous blood is blue, and capillary blood is violet. Each lesson includes clearly displayed labels and specific coloring instructions. This book is an invaluable and lasting resource for students in disciplines including anatomy and physiology, biology, nursing, physical therapy and rehabilitation, medical technology, nutrition, physical education, allied health and health sciences. The 250 plates in the book are organized in the following sections: Homeostasis The Cell Transport Mechanisms Nervous System Muscle Cardiovascular System Renal System Respiratory System Gastrointestinal System Metabolism Endocrine System Reproduction

The complexity of the brain, the house of human consciousness, is so great that scientists are still mystified as to how it works. For a student, learning the various cellular organizations, cranial nerves, and neural connections can be an intimidating challenge. The Human Brain Coloring Workbook is a breakthrough approach to understanding the brain's organization and functions. It features 125 striking, computer-generated illustrations that will help students gain a clear and enduring comprehension of this highly intricate structure. Learning interactively through coloring thoroughly fixes concepts in the mind and takes less time than memorizing from textbooks. The ideas behind each lesson are amply explained, and more complex subjects are approached through the gradual introduction of simple drawings. After completing the lessons in this book, not only will you understand the brain's basic configurations and functions, you will also have a fully colored and labeled resource ready for review whenever you need to brush up. This book is an invaluable and lasting resource for students in a number of disciplines, including medicine, anatomy and physiology, biology, psychology, nursing, rehabilitation, health administration, medical technology, and nutrition. The 125 plates in the book are organized in the following sections: *Central Nervous System Development *The Meninges *The Cerebral Hemispheres *The Cranial Nerves *The Ventricular System and Cerebrospinal Fluid *The Limbic System *The Thalamic Complex *The Basal Ganglia *The Brainstream *The Cerebellum *The Cerebrovascular System *Neuronal Conduction *The Autonomic Nervous System *The Ascending and Descending Neuronal Tracts *Atlas of Human Brain Sections
