Sudden cardiac arrest is not a heart attack (myocardial infarction). Heart attacks occur when there is a blockage in one or more of the coronary arteries, preventing the heart from receiving enough oxygen-rich blood. If the oxygen in the blood cannot reach the heart muscle, the heart becomes damaged. In contrast, sudden cardiac arrest occurs when the electrical system to the heart malfunctions and suddenly becomes very irregular. The heart beats dangerously fast.

Sudden arrhythmic death syndrome, or SADS, is when someone dies suddenly following a cardiac arrest and no obvious cause can be found. This affects around 500 people in the UK every year. We know that, in many cases, this is caused by an inherited heart condition and the person's immediate family should be referred to a specialist genetics centre for assessment.

Immediate CPR is crucial for treating sudden cardiac arrest. By maintaining a flow of oxygen-rich blood to the body's vital organs, CPR can provide a vital link until more-advanced emergency care is available. If you don't know CPR and someone collapses unconscious near you, call 911 or emergency medical help.
