If  $\beta_0 = 10$ , the simple linear regression model becomes  $y_i = \beta_0 + \beta_1 x_i$  (b)

Graphically, setting  $\beta_0 = 10$  implies the mean of the simple linear regression model  $E(y|x) = \beta_0 + \beta_1 x$  passes through the origin (0, 0). (c) To save on subscript notation we set  $\beta_0 = \beta_1$ . The sum of squares function becomes
