A three-volume essay writing course for students in American English. Academic Writing Skills 3 looks at the specific components of academic writing, such as avoiding logical fallacies, and synthesizing and improving the clarity of sentences. It is appropriate for advanced writing students needing to develop specific writing and analytical skills to complete academic writing tasks.

Adapted from the best-selling St. Martin ' s Guide to Writing, Axelrod and Cooper ' s Concise Guide to Writing provides streamlined versions of the chapters covering six of the most commonly assigned genres in the first-year writing course — remembering events, writing profiles, explaining concepts, arguing a position, proposing a solution, and justifying an evaluation. The careful integration of well-chosen readings with guided writing instruction in these chapters is complemented by coverage of strategies for reading, writing, and research in brief-but-complete chapters at the end of the book. Read the preface.

This textbook provides instruction in college level rhetoric and writing. It offers readings, a research manual, a handbook and supports a range of approaches to teaching and learning, including collaboration, visual rhetoric, personal writing, writing about literature, writing in the community and the workplace, field research, portfolios, oral presentations, essay exams, and ESL. It contains step-by-step guides to writing specific kinds of essays -- remembering events, writing profiles, explaining a concept, finding common ground, arguing a position, proposing a solution, justifying an evaluation, speculating about causes, and interpreting stories. Because so much college writing requires strong argumentation skills, four of the assignment chapters focus on argumentative writing, and a separate strategies chapter covers theses, reasons and support, counterarguments, and logical fallacies. Three full chapters on research give students useful strategies not only for conducting field, library, and Internet research, but also for evaluating sources; deciding whether to quote, paraphrase, or summarize; avoiding plagiarism; and documenting sources. The authors have included 39 readings by well-known authors and various "fresh" voices, including 12 students, providing well-written examples of the different types of essays and papers that students might be asked to complete.

Many in the mathematics community in the U.S. are involved in mathematics education in various capacities. This book highlights the breadth of the work in K-16 mathematics education done by members of US departments of mathematical sciences. It contains contributions by mathematicians and mathematics educators who do work in areas such as teacher education, quantitative literacy, informal education, writing and communication, social justice, outreach and mentoring, tactile learning, art and mathematics, ethnomathematics, scholarship of teaching and learning, and mathematics education research. Contributors describe their work, its impact, and how it is perceived and valued. In addition, there is a chapter, co-authored by two mathematicians who have become administrators, on the challenges of supporting, evaluating, and rewarding work in mathematics education in departments of mathematical sciences. This book is intended to inform the readership of the breadth of the work and to encourage discussion of its value in the mathematical community. The writing is expository, not technical, and should be accessible and informative to a diverse audience. The primary readership includes all those in departments of mathematical sciences in two or four year colleges and universities, and their administrators, as well as graduate students. Researchers in education may also find topics of interest. Other potential readers include those doing work in mathematics education in schools of education, and teachers of secondary or middle school mathematics as well as those involved in their professional development.

Margaret A. Syverson discusses the ways in which a theory of composing situations as ecological systems might productively be applied in composition studies. She demonstrates not only how new research in cognitive science and complex systems can inform composition studies but also how composing situations can provide fruitful ground for research in cognitive science. Syverson first introduces theories of complex systems currently studied in diverse disciplines. She describes complex systems as adaptive, self-organizing, and dynamic; neither utterly chaotic nor entirely ordered, these systems exist on the boundary between order and chaos. Ecological systems are "metasystems" composed of interrelated complex systems. Writers, readers, and texts, together with their environments, constitute one kind of ecological system. Four attributes of complex systems provide a theoretical framework for this study: distribution, embodiment, emergence, and enaction. Three case studies provide evidence for the application of these concepts: an analysis of a passage from an autobiographical poem by Charles Reznikoff, a study of first-year college students writing collaboratively, and a conflict in a computer forum of social scientists during the Gulf War. The diversity of these cases tests the robustness of theories of distributed cognition and complex systems and suggests possibilities for wider application. Syverson concludes with a discussion of some implications of an ecological approach for composition research, pedagogy, and assessment, presenting the Learning Record model as one practical application of the theory. Finally she argues that technological changes have created new environments for composing, providing an opportunity to reconsider conventional environments as well.

Oxford English for Academic Purposes offers a specialist course covering listening, speaking and reading in key areas of academic life such as lectures, presentations and textbooks. The course is consistent with levels A2 to C1 of the Common European Frame of Reference for the teaching of foreign languages.

Penn Statements is a reader of student essays and compositions from courses offered through Penn State's Program in Writing and Rhetoric. All essays are submitted by students and are used as examples of student writers engaging with rhetorical principles.
