July 01, 2015 // By Florian Mueller. print reddit. A flyback converter is very attractive in that it is typically the least expensive isolated topology because it uses the fewest number of components. For offline flyback designs a quasi-resonant (QR) controller achieves the best efficiency and the best EMI behavior.

Two-switch-quasi-resonant Flyback converter

If the quasi-resonant flyback converter has a turns ratio of 20, and an output voltage of 5 volts, VRO will be 100 volts. So for a bus voltage of 375 volts, the switch will turn on at 275 volts. If the effective output capacitance, COSseff, is 73 pF, and the switching frequency, fSW, is 66 kHz, the power loss will be 0.18 watt, i.e., (Eq. 2).
