Sleep Deprivation Research Papers - Academia.edu

The effects of sleep deprivation (SD) have been studied for over a century and are not only limited to cognitive deficits but whole body deterioration as well. Research has shown that the body reacts to sleep deprivation by affecting gene expression, cellular responses in organs and tissues, and overall homeostatic balance.

Total sleep deprivation (TSD) may induce fatigue, neurocognitive slowing and mood changes, which are partly compensated by stress regulating brain systems, resulting in altered dopamine and cortisol levels in order to stay awake if needed. These systems, however, have never been studied in concert. At baseline, after a regular night of sleep, and the next morning after TSD, 12 healthy subjects ...
