Red, brown, yellow, yellowish-red, grayish-brown, and pale red are all good descriptive colors of soil, but not very exact. Just as paint stores have pages of color chips, soil scientists use a book of color chips that follow the Munsell System of Color Notation ([www.munsell.com](http://www.munsell.com)).

Abstract. In 1990, during the initial field season of the Wembere-Manonga Paleontological Expedition (WMPE), the main characters of the structure, stratigraphy, paleoenvironment, and geological history of the Neogene lake basin in the Manonga Valley were outlined.

Contributions to this volume detail paleontologic research in Manonga Valley, and shed important light on the evolutionary development of eastern Africa. Chapters provide novel insights into the taxonomy, paleobiology, ecology, and zoogeographic relationships of African faunas, as well as lay the foundation for future geological, paleontological, and paleoecological studies in this important area. The book concludes with a discussion of the importance of investigations on broader geographical sites, including the Manonga Valley, for human evolution research. The text is supported by 143 illustrations.
