Study Guide - The Rock Cycle. Study Guide - The Rock Cycle. Section 1. A naturally occurring solid mixture of one or more minerals or organic matter is called \_\_\_\_\_. The continual process by which new rock forms from old rock is called \_\_\_\_\_. Rocks have been used by humans throughout history for tools, weapons and \_\_\_\_\_.

Study Guide - The Rock Cycle

The rock cycle is illustrated in Figure . Igneous rocks are produced when molten rock cools and solidifies. When exposed at the earth's surface, the rock is broken down into tiny particles of sediment by weathering and erosion. This weathered material is carried by water or wind to form sedimentary deposits such as beaches, sand bars, or deltas. The sediment is gradually buried by more sediment and subjected to higher pressure and temperature.

The Rock Cycle - CliffsNotes Study Guides

23. To make rocks easier to study, they are classified into three main groups: igneous rocks, sedimentary rocks, and metamorphic rocks. 24. Let's take a closer look at these three groups of rocks. 25. Graphic Transition - Types of Rocks 26. Temperatures within the Earth can be so hot that solid rock is melted into a liquid called molten rock. 27.
