In *The Unsung Hero*, award-winning author Suzanne Brockmann dazzled readers with her remarkable cast of tough and tender U.S. Navy SEALs. Now her daring men in uniform return for *THE DEFIANT HERO*—a thrilling novel of steadfast courage, intimate passions, and the profound risks that are taken in the name of love. . . . "The United States refuses to negotiate with terrorists." Meg Moore remembered the warning from her job as a translator in a European embassy. Those same words will spell out a death sentence for her daughter and grandmother who have been kidnapped by a lethal group called the Extremists. Meg will do anything to meet their unspeakable demands; anything—even kill—to save her child. When Navy SEAL Lieutenant, junior grade, John Nilsson is summoned to Washington, D.C., by the FBI to help negotiate a hostage situation, the last person he expects to see holding a foreign ambassador at gunpoint is Meg. He hasn't seen her in years, but he's never forgotten how it feels to hold her in his arms. John could lose his career if he helps her escape. She will lose her life if he doesn't. . . .

Developers who want to access USB devices from their embedded systems will find a helpful resource in *USB Embedded Hosts: The Developer's Guide*. This new book from the author of *USB Complete* shows how small systems can take advantage of the same wealth of USB devices available to conventional PCs. The book begins with a review of USB host communication protocols. Readers then learn which USB host requirements are relaxed for embedded systems and what new requirements some embedded systems must meet. To help in selecting a development platform, the book explores available hardware and software for USB host communications in small systems. The heart of the book focuses on communicating with USB devices. The topics (with example code) include USB drives, keyboards, virtual serial ports, network bridges, mics, speakers, video cameras, and printers, plus devices that don't fit defined USB classes. Also discussed are systems that support both USB host and device functions. The example code is written for the BeagleBoard-xM open development board using a distribution of Linux targeted to small systems. Also covered is how to use Linux commands and utilities to learn about, monitor, and debug communications with USB devices.

Assembly Language for x86 Processors, 6/e is ideal for undergraduate courses in assembly language programming and introductory courses in computer systems and computer architecture. Written specifically for the Intel/Windows/DOS platform, this complete and fully updated study of assembly language teaches students to write and debug programs at the machine level. Based on the Intel processor family, the text simplifies and demystifies concepts that students need to grasp before they can go on to more advanced computer architecture and operating systems courses. Students put theory into practice through writing software at the machine level, creating a memorable experience that gives them the confidence to work in any OS/machine-oriented environment. Proficiency in one other programming language, preferably Java, C, or C++, is recommended.
