Evolution Is Not the Bible's Enemy Saving Darwin explores the history of the controversy that swirls around evolution science, from Darwin to current challenges, and shows why—and how—it is possible to believe in God and evolution at the same time.

A scientist and former evangelical argues that holding onto a belief in a literal, historical Adam has forced many Christians to reject science and become intellectually isolated from the modern world. The Bible ' s first man stands at the center of a crisis that is shaking much of Christianity. In the evangelical world, scholars have been ostracized and banished from their academic communities for endorsing a modern scientific understanding of the world, even as they remained strong Christians. Self-appointed gatekeepers of traditional theology demand intellectual allegiance to an implausible interpretation of the Genesis creation story, insisting that all humanity must be descended from a single, perfect human pair, Adam and Eve. Such a view is utterly at odds with contemporary science. It wasn ' t always this way. Karl Giberson spotlights the venerable tradition of Christian engagement with new knowledge and discoveries. When global exploration, anthropology, geology, paleontology, biblical studies, and even linguistics cast doubt on the historicity of Adam and his literal fall into sin, Christians responded by creatively reimagining the creation story, letting Adam “ evolve ” to accommodate his changing context. Even conservative evangelical institutions until recently encouraged serious engagement with evolutionary science, unhindered by the straitjacket of young-earth creationism, intelligent design, or other views demanding that Adam be a historical figure. Giberson calls for a renewed conversation between science and Christianity, and for more open engagement with new scientific discoveries, even when they threaten central doctrines. Christians should not be made to choose between their faith and their understanding of the universe. Instead, as Giberson argues, they should follow in the once robust tradition of exploring science openly within the broad contours of Christian belief.

"A deeply inspiring overview of the grand epic of cosmic, biological, and cultural evolution written for Christians and grounded in scientific revelation. Bravo!" ~ Michael Dowd, author of Thank God for Evolution What would the biblical creation story look like if it was written today? Is it possible to view modern scientific explanations as "creation stories"? Using biblical imagery and vivid metaphors, popular author and leading science-and-religion scholar Karl Giberson recasts the Genesis creation story within the framework of the latest ideas from modern science. Seven Glorious Days takes the

A creationist-turned-scientist demonstrates the facts of evolution and exposes Intelligent Design's real agenda Science is on the defensive. Half of Americans reject the theory of evolution and "Intelligent Design" campaigns are gaining ground. Classroom by classroom, creationism is overthrowing biology. In *Why Darwin Matters*, bestselling author Michael Shermer explains how the newest brand of creationism appeals to our predisposition to look for a designer behind life's complexity. Shermer decodes the scientific evidence to show that evolution is not "just a theory" and illustrates how it achieves the design of life through the bottom-up process of natural selection. Shermer, once an evangelical Christian and a creationist, argues that Intelligent Design proponents are invoking a combination of bad science, political antipathy, and flawed theology. He refutes their pseudoscientific arguments and then demonstrates why conservatives and people of faith can and should embrace evolution. He then appraises the evolutionary questions that truly need to be settled, building a powerful argument for science itself. Cutting the politics away from the facts, *Why Darwin Matters* is an incisive examination of what is at stake in the debate over evolution.

If Darwin were to examine the evidence today using modern science, would his conclusions be the same? Charles Darwin's *On the Origin of Species*, published over 150 years ago, is considered one of history's most influential books and continues to serve as the foundation of thought for evolutionary biology. Since Darwin's time, however, new fields of science have emerged that simply give us better answers to the question of origins. With a Ph.D. in cell and developmental biology from Harvard University, Dr. Nathaniel Jeanson is uniquely qualified to investigate what genetics reveal about origins. *The Origins Puzzle Comes Together* If the science surrounding origins were a puzzle, Darwin would have had fewer than 15% of the pieces to work with when he developed his theory of evolution. We now have a much greater percentage of the pieces because of modern scientific research. As Dr. Jeanson puts the new pieces together, a whole new picture emerges, giving us a testable, predictive model to explain the origin of species. A New Scientific Revolution Begins Darwin's theory of evolution may be one of science's "sacred cows," but genetics research is proving it wrong. Changing an entrenched narrative, even if it's wrong, is no easy task. Replacing Darwin asks you to consider the possibility that, based on genetics research, our origins are more easily understood in the context of . . . In the beginning . . . God, with the timeline found in the biblical narrative of Genesis. There is a better answer to the origins debate than what we have been led to believe. Let the revolution begin! About the Author Dr. Nathaniel Jeanson is a scientist and a scholar, trained in one of the most prestigious universities in the world. He earned his B.S. in Molecular Biology and Bioinformatics from the University of Wisconsin-Parkside and his PhD in Cell and Developmental Biology from Harvard University. As an undergraduate, he researched the molecular control of photosynthesis, and his graduate work involved investigating the molecular and physiological control of adult blood stem cells. His findings have been presented at regional and national conferences and have been published in peer-reviewed journals, such as *Blood*, *Nature*, and *Cell*. Since 2009, he has been actively researching the origin of species, both at the Institute for Creation Research and at Answers in Genesis.

This debut book boldly seeks to argue competitively in the same intellectual field as famous atheists such as RICHARD DAWKINS, CHRISTOPHER HITCHENS, and BERTRAND RUSSELL, and to do so in the spirit and style of such famous Christian apologists as C.S. Lewis and RAVI ZACHARIAS, drawing heavily on basic science, history, physics, psychology, paleontology, anthropology, archeology, neurology, child development and even science fiction. It describes the evolution of the human brain in ancient hominids allowing humans to eventually conceive a non-physical realm (the spirit world), and as the mind evolved intellectually from primitive animism to Christology, God revealed himself gradually as the developing hominid brain became able to comprehend new ideas. For Believers, the author presents a new, intellectually satisfying way to understand and defend the Bible. For both Skeptics and Believers, a worldview is offered that is spiritually meaningful and scientifically sound.

"One day, on tearing off some old bark, I saw two rare beetles, and seized one in each hand; then I saw a third and new kind, which I could not bear to lose, so that I popped the one which I held in my right hand into my mouth." At the age of 22 Charles Darwin clambered up the steps of HMS Beagle, armed with enough notepads to last him for several years and set sail on a journey of exploration that would change his life and how we view the entire world forever. This book tells the story of Charles Darwin, and shows how his revolutionary research changed the world forever. From his fascination with the natural world which began at an early age, his love of collecting new specimens and keen eye for observation, to his groundbreaking theory of evolution, uncover the incredible life of Charles Darwin with this beautifully illustrated narrative non-fiction book. Published to celebrate the 200th anniversary of the launch of the HMS Beagle, this is the perfect book for any child who has ever looked at the world and asked 'why'.

Bringing together a biblically based understanding of creation and the most current research in biology, Darrel R. Falk outlines a new paradigm for relating the claims of science to the truths of Christianity.

Like detectives sleuthing out the greatest mystery of all, scientists over the centuries have uncovered clues about the structure and origins of the universe. The work of Galileo, Newton, Einstein, and a host of other tenacious researchers and thinkers reveals a cosmos of almost unimaginable wonder and beauty. If we then honestly follow the evidence of science wherever it leads, where do we end up? Karl Giberson takes us on a fascinating guided tour of planets and protons, galaxies and gamma rays. We discover that if gravity were slightly stronger, neutrons a tiny bit lighter, the size of our sun somewhat larger or a dozen other factors altered by fractions, there would be no life. The author shows that for many observers, even those who do not embrace religious faith, all of this looks suspiciously like the expression of a grand plan--a cosmic architecture capable of both supporting life such as ours, and inspiring observers like us to seek out hints of a creator. Join this cosmic expedition
