~~Shell Design Engineering Practice Bem~~

A BEM shell-and-tube heat exchanger with one shell pass and two tube passes is to be designed to condense 9800 kg/hr of steam at 1 atm. The steam may be assumed to enter the shell side as saturated vapor and leave as saturated liquid. Water is employed as the cooling fluid in the tubes with an inlet temperature of 25 C. Find an optimal design.

~~Shell Design Engineering Practice Bem~~

The mechanical design of a shell and tube heat exchanger provides information on items such as shell thickness, flange thickness, etc. These are calculated using a pressure vessel design code such as the Boiler and Pressure Vessel code from ASME (American Society of Mechanical Engineers) and the British Master Pressure Vessel Standard, BS 5500.

~~SHELL AND TUBE HEAT EXCHANGERS - Thermopedia~~

All shell-and-tube heat exchangers can be categorized into two broad categories: U-tube and straight tube. For clarity of definition, the Tubular Exchanger Manufacturers Association (TEMA) has defined the mechanical designs for front-end head types, shell types and rear-end head types by a lettering system called the nomenclature chart. While there are many different types of U-tube and ...
