difficulty breathing, weakness, nausea, headache, slurred speech, chest pain, allergic reaction, seizure, and anxiety. Each case study is presented in full, poses questions to the reader, and is followed by a summary of the case, including answers to the questions posed. The objectives for each of the case studies in this book are as follows: Describe the appropriate initial management based on initial assessment findings. Interpret the patient's cardiac rhythm, and determine if a correlation exists between the patient's condition and their cardiac rhythm. Formulate a field impression based on the patient's signs and symptoms, and findings of the focused history and physical examination. Determine if the patient's vital sign values and SAMPLE history findings are consistent with your field impression. Identify specific treatment that is required for the patient's condition. Determine if further treatment is required following a post-treatment reassessment of the patient. Based on the patient's condition, identify any special considerations for care.
