Then, I share with you my 5 step method to visualize and prepare every scene I create for LayOut. These 5 steps will give you full control over the look of your model in LayOut.

Visible Objects - Control what's visible in your scene by hiding or unhiding layers.

Foreground Depth - Set the viewing plane depth at which you begin to see objects in your scene. By default, the foreground depth starts at the location of your camera, but you can manually set a foreground depth using section cuts and clipping planes.

Background Depth - Set how deep into the model you

want to see by using object masks or fog. Camera Perspective - Position your camera to the view you want to see, and configure your field of view and perspective settings. Style - Determine how your model will look. This includes render settings for the faces and edges in your model, but also includes specialty settings like watermarks, guides, and section planes. Not only will you understand exactly what those five points are, you'll learn multiple ways to control them.
