Provides a comprehensive, real-world presentation of management control systems (MCS) through 60 actual case studies. Capturing the complex real world that managers face when using MCS, this book presents a rich and diverse selection of recent, actual cases, addressing both the problems confronting those companies and the solutions they devised. It is designed to help readers develop thinking processes to guide them through decisions and help them develop problem-finding and problem resolution skills. While it focuses on the use and effects of "financial results controls" it also describes situations where financial controls are not effective and discusses alternatives that managers can use in those situations. The book also includes a complete chapter on ethical issues. An essential reference for any professional manager in virtually any organization.

EBOOK: Management Control Systems, 2e

A fundamental challenge that management faces in the twenty-first century is how to exercise adequate control, i. e. how to guide and direct the behaviour of their subordinates. With increasing globalisation firms witness a cross-cultural impact too. Of particular interest is the question of whether to use the standardized form of control similar to the home base of firms or whether to adapt their control practices to the local specificities. Given the meagre state of the literature in management control with a cross-cultural emphasis, this study addresses a real world problem, namely the question whether management control practices are configured similarly or differently across cultures. Relying on a generalized industry sample across four countries (Belgium, Canada, Germany and Poland), this study sought to shed light on one of the more intriguing questions ¶ "Does culture matter?" ¶ for specific control areas, in particular for performance measurement, performance evaluation and reward systems. The theoretical foundations are grounded in the cultural framework of the GLOBE project accompanied by thoughts of new institutionalism, stakeholder theory and contingency thoughts. Hypotheses are tested by mean comparisons (ANOVA, ANCOVA). The empirical findings highlight cultural differences for a broader set of control practices and deliver new insights into the intersection of culture and management control. This dissertation crafts a novel topic with high relevance for both researchers and practitioners. The study demonstrates areas for which management control practices should be adapted to the local needs and areas for which those practices could be harmonized in the whole company. This monograph stresses some areas in which future empirical cross-cultural research can benefit, and some areas where conceptual thoughts could be advanced.

Based on a ten-year examination of control systems in over 50 U.S. businesses, this book broadens the definition of control and establishes a critical bridge between the disciplines of strategy and accounting and control. In addition to the more traditional diagnostic control systems, Simons identifies three new control systems that allow strategic change: belief systems that communicate core values and provide inspiration and direction, boundary systems that frame the strategic domain and define the limits of freedom, and interactive systems that provide flexibility in adapting to competitive environments and encourage organizational learning. These four control systems, according to Simons, will provide managers with the basic levers for pursuing strategic objectives.

In times of globalization, competition and economic and technological progress, the permanent improvement of the planning, coordination and control system of companies is a major task of Controlling. This book presents a concise concept for the design of a ratio and management report system for each functional part of the company. It addresses as well practitioners who seek decision support in their day-to-day business, as scientists and students who want to obtain information about the state of the art of Management Control and Controllershship.
