Solution Definition (Illustrated Mathematics Dictionary)

Any two substances which can be evenly mixed may form a solution. Even though materials of different phases may combine to form a solution, the end result always exists of a single phase. An example of a solid solution is brass. An example of a liquid solution is aqueous hydrochloric acid (HCl in water).

Solution Definition in Chemistry - ThoughtCo

With a system of equations or system of inequalities, the solution set is the set containing value (s) of the variable (s) that satisfy all equations and/or inequalities in the system.

Mathwords: Solution

Example: $x + 2 = 7$ The variable is x , when we put 5 in place of x we get $5 + 2 = 7$, and $5 + 2 = 7$ is true, so $x = 5$, and the equation is solved.

Solve Definition (Illustrated Mathematics Dictionary)

An infinite solution has both sides equal. For example, $6x + 2y - 8 = 12x + 4y - 16$. If you simplify the equation using an infinite solutions formula or method, you'll get both sides equal, hence, it is an infinite solution. Infinite represents limitless or unboundedness.

Example: roots of polynomials. The solutions of any quadratic equation with complex coefficients can be expressed in closed form in terms of addition, subtraction, multiplication, division, and square root extraction, each of which is an elementary function. For example, the quadratic equation $ax^2 + bx + c = 0$, is tractable since its solutions can be expressed as a closed-form expression, i.e. in terms of ...

Functions involving more than two variables also are common in mathematics, as can be seen in the formula for the area of a triangle, $A = bh / 2$, which defines A as a function of both b (base) and h (height). In these examples, physical constraints force the independent variables to be positive numbers.

Recursive Function is a function which repeats or uses its own previous term to calculate subsequent terms and thus forms a sequence of terms. Usually, we learn about this function based on the arithmetic-geometric sequence, which has terms with a common difference between them. This function is highly used in computer programming languages, such as C, Java, Python, PHP.
