The ASIA Impairment Scale is another helpful guide to understanding an injury. It was developed by doctors at the American Spinal Injury Association (ASIA) to categorize the extent of an injury in terms of the degree of damage to the spinal cord. If the injury is "complete," (ASIA A) it means that no messages can travel across the location of the injury to the brain.

Spinal cord: Anatomy, functions, and injuries

Spinal cord damage occurs when blunt force trauma or a medical malady affects the spine of the infant. This could come in the form of a bruise (a contusion) or a complete tear (a transection). Spinal cord damage can also come from a lack of diagnosis or a misdiagnosis of spina bifida, a condition in which the vertebrae does not completely enclose the raw nerves of the spine.

If you do have a spinal cord injury, you'll usually be admitted to the intensive care unit for treatment. You may even be transferred to a regional spine injury center that has a team of neurosurgeons, orthopedic surgeons, spinal cord medicine specialists, psychologists, nurses, therapists and social workers with expertise in spinal cord injury.

---

Spinal cord injury - Diagnosis and treatment - Mayo Clinic

Spinal cord injury (SCI) disrupts the crucial "crosstalk" between the spinal autonomic nervous system and supraspinal control centers. Therefore, SCI may result not only in motor paralysis but also in potentially life-threatening impairments of many autonomic functions including, but not limited to, blood pressure regulation.
