One of the most important challenges faced by Oracle database administrators and Oracle developers is the need to tune SQL statements so that they execute

efficiently.

Poorly tuned SQL statements are one of the leading causes of substandard database performance and poor response time. SQL statements that perform poorly result in frustration for

users, and can even prevent a company from serving its customers in a timely manner. In this book, Mark Gurry shares his in-depth knowledge of Oracle's SQL statement optimizers. Mark's knowledge
